Why a pair can be skipped without risk: distance changes by at most L per unit time
distance between the pair (arbitrary units)
12

4
d0 - L h: the lowest the
distance can reach
threshold
Skip the pair when d0 > threshold + L h, with L = vmax_i + vmax_j

time within one step (0 to h)
skipped (d0 = 9.5)
kept: bound reaches threshold (d0 = 6)
Schematic, not data.
